

Vantage NAF System

Vantage **Non-Aqueous Fluid (NAF)** system is designed and developed by Vertechs Oil & Gas Technology Co., Ltd. There are only four main additives in Vantage System, VC-TROL (FL Control), VT-MUL (Emulsifier), VT-MOD (Rheology Modifier) and VT-OGEL (Organo-Gel), simplified while compared to conventional Oil-Base Mud system. Vantage products work reliably regardless of base oil (pilot testing required) and provide a simple formulation for efficient preparation and maintenance.

Features

- Temperature resistance up to 150°C (300°F)
- Simplified range of additives effective at low concentration.
- Easier mixing and maintenance requirements.
- Superior electrical stability and suspension stability.
- Simpler to weight up compared to traditional OBM
- Contamination resistant & provides stable performance
